Daniel Robert

Morning Review (α & β Strategy)

Good morning, community members!

This is Daniel Robert. Today marks an exciting Friday! First of all, congratulations to everyone who participated in the second test of AlphaStream 5.0. Our trading signals have accurately hit twice in a row, and the price of NAS tokens has risen as expected. Everything has unfolded just as I predicted. Right? This is the perfect combination of strategy and execution!

You might be wondering why I'm not worried about the recent stock market? The key lies in whether the current stock indices will drop further, which is the core factor influencing the potential 30% return for the next month. But I can tell you, more importantly, I'm holding a strategy that guarantees over 100% profit! Yes, this is the opportunity that sets us apart in the current market.

NAS COMMUNITY

Today, even more exciting, the third trading signal from the AlphaStream 5.0 test is about to be released!

This may be the most anticipated moment of your weekend. Let me ask you, guys: Are you ready? Opportunities don't wait for the hesitant. Now is the best time to take action.

Let's work closely together, seize every opportunity, and achieve extraordinary results! Today's victory belongs to everyone who is fully dedicated to their dreams!

Transaction Record for AlphaStream 5.0 Round 2 Internal Test Learning Program

Rules:
1. Initial capital: \$500 testing fund
2. Test cycle: 3-7 days
3. Total assets compound growth rate target: more than 60%

Date	Transaction Type	Direction	Number of trades	success rate of trades	Profit Ratio	Cumulative Return Rate	Total Assets Growth	Account capital growth rate
11/21/2024	/	/	/	/	/	/	\$500	0.00%
11/21/2024	CBF/USDT-100X	LONG	1	100%	62%	62.00%	\$562	12.40%
11/21/2024	CBF/USDT-100X	LONG	1	100%	71%	133.00%	\$633	26.60%

NAS COMMUNITY

First, let me extend a warm congratulations to those who participated in the second test of AlphaStream 5.0 yesterday! I also want to thank Helmsman Montgomery Keane for the exceptional guidance, which allowed us to achieve nearly 60% combined profit through two trading signals in just 45 minutes! This has been an absolutely stunning trading experience.

Such trading performance not only validates the strength of AlphaStream 5.0 but also proves once again the importance of following strategy and executing quickly. This has been a perfect test of decision-making and action, and you all did an outstanding job, guys!

Guys, please stay closely tuned to our Telegram trading signal group! The third trading signal has been released, and now is the time to act. Let me be clear with you: In the spot investment field (such as stock investments), NAS tokens are an unparalleled, certain opportunity right now. I firmly believe that by March of next year, NAS tokens are likely to hit the \$15 target. This is not a casual statement, but one based on my deep understanding of the market and the performance of the AlphaStream 5.0 test.

NAS COMMUNITY

This is the miracle brought by AlphaStream 5.0, and it's the result of our collective effort. Let's continue this momentum, embrace more opportunities, and achieve more victories!

Back to the market, guys, although the three major indices saw a slight rebound yesterday, the gap below remains unfilled. Taking the Dow Jones as an example, we need to be cautious of a potential repeat of the July 31 movement—at that time, the Dow briefly rebounded after touching the 20-day moving average, but the rebound only lasted 5 days before a significant correction. In other words, filling this gap is just a matter of time.

NAS COMMUNITY

My strategy? It's perfectly in line with Helmsman Montgomery Keane: Light on the indices, heavy on individual stocks. This means maintaining flexibility in position sizes while diversifying investments to adapt to the current market environment. This approach not only effectively avoids risks but also captures potential profit opportunities.

Recently, the targets tracked by our α & β strategy have been performing very well. Today, I'll be adding a new target for you all. This not only enriches our operations but also helps you better understand the core essence of the α & β strategy.

NAS COMMUNITY

Guys, looking back at last week, we used the α & β strategy to lock in AFRM and WIX, both achieving around a 15% increase in just two weeks—a textbook example of short-term investing. Today, I'm adding a new target: YEYS.

NAS COMMUNITY

From the chart, YEYS shows excellent characteristics for a bullish breakout: the 5-day moving average strongly crosses above the 20-day moving average, breaking through the previous high, and more notably, the MACD forms an upward golden cross at the bottom. This is a typical bullish signal. The fundamentals are also impressive, with a price-to-earnings ratio under 50, making it a star in the 5G and ETF investment concept sectors. The short-term target is \$200, and the potential is very promising.

If you're not yet familiar with the application of the $\alpha&\beta$ strategy, don't hesitate to message me directly. Mastering this strategy will drastically improve your short-term trading efficiency. Additionally, I strongly recommend following Helmsman Montgomery Keane's medium- and long-term trend shares, as this will help you plan for larger trends and take your returns to a whole new level.

You know I'm always straightforward. When I support something I believe in, I do so wholeheartedly; when someone ignores the rules and the opportunity, I will not tolerate it. The second test of AlphaStream 5.0 right now is a once-in-a-lifetime trading opportunity. But let me be candid: if you dismiss it or act recklessly, failing to follow the guidance, you simply don't deserve to stand

NAS COMMUNITY

alongside Helmsman Montgomery Keane. This isn't just disrespecting the team—it's a waste of an incredible opportunity.

Discipline and execution are the cornerstones of success. If you cannot strictly follow the trading signals, I support Helmsman in removing those who fail to follow the rules from participation. Because what we seek is a group of like-minded partners who act decisively, not hesitant onlookers.

The opportunity is right in front of us; the future depends on what we do now. Let's seize this opportunity with unwavering commitment and precise execution! Success is reserved for those who are truly prepared. Guys, take action—this is our moment!

Guys, I've just carefully studied this trading signal, and it's really solid. I want to remind you all, the testing funds you are using are not ordinary resources. These were hard-won resources negotiated by Helmsman Montgomery Keane and sponsors for our community—they are backed by Helmsman and the entire community's reputation. Therefore, I ask that you cherish this opportunity because it's not just about profit, but an invaluable learning and growth opportunity.

NAS COMMUNITY

However, I must be blunt: some people ignoring discipline and responsibility—do you know how much damage this can cause to the test data? If some people deviate from the signal and trade freely, it could distort the data from the second test of AlphaStream 5.0. This is not only unfair to the community, but it also undermines the hard work of all serious participants. Remember, discipline is the foundation of success. We must remain consistent and strictly follow the trading signals to ensure the success of the test. Every trading signal is meticulously designed and optimized, and your serious participation is not only beneficial to yourself but also a sign of respect to the entire team.

Guys, I must raise a serious concern. If our actions in this test distort the test data, it could negatively impact the future growth potential of NAS tokens and directly harm our collective interests. We all know that many friends have already invested in the NAS tokens and are actively increasing their positions. Any improper behavior could ruin this once-in-a-lifetime opportunity.

Therefore, what I'm saying today is meant to wake everyone up and remind you to be cautious. We're discussing this not to reprimand, but to highlight an important fact: the opportunity of this AlphaStream 5.0 system test is extremely precious, and it concerns our future success—it could even determine our

NAS COMMUNITY

position in this market. We have a responsibility to treat everything with the utmost seriousness and responsibility.

Remember, this isn't just a test; it's an excellent opportunity for us to deeply understand and master the essence of the AlphaStream 5.0 system. Through this test, we can learn more precise trading strategies and lay a solid foundation for our future investment strategies. And this, can only be achieved through our collective efforts.

No matter how powerful an AI quantitative trading system is, it cannot function without the precise coordination of technical indicators. This is true even for the powerful AlphaStream 5.0. The trade that just closed yielded a profit of over 50%,

NAS COMMUNITY

but let me tell you, such results are not accidental. So, how was this trade signal captured?

Let's review the 5-minute chart for CBF/USDT: the MACD formed an upward golden cross, and the 5-day moving average strongly broke above the 20-day moving average, establishing a short-term rebound trend. This is one of the high-probability signals for short-term success. With the real-time alerts and signal confirmations from AlphaStream 5.0, we seized this trading opportunity with precision.

This is not just a victory for technology; it's a victory for execution! Congratulations to all the friends who strictly followed the strategy and once again earned over 50% profit per trade. Such results are a direct reflection of the powerful capabilities of the AlphaStream 5.0 system and, more importantly, the result of our collective effort and decisive action.

The strength of AlphaStream 5.0 is no accident. It is the product of Helmsman Montgomery Keane's years of unwavering dedication and deep strategic accumulation. Success is never about luck; it is the inevitable result of combining the right methods with wisdom.

NAS COMMUNITY

Guys, this afternoon, Helmsman Montgomery Keane will share more insightful content, and I believe it will be an inspiring exchange. Who knows, there may even be more great opportunities waiting for us. Stay tuned, stay prepared, and let's continue chasing success together!

Professor Montgomery Keane (Helmsman)

Sharing Topics:

- 1. What are the potential benefits of betting on Trump loosening regulations?**
- 2. AlphaStream 5.0 Information: What is contract trading and spot trading?**

Good afternoon, my friends!

I'm Montgomery Keane and your long-time friend. Time flies when you're fully immersed in trading. Before you know it, the week is almost over. Have you already planned your relaxing getaway this weekend? Looking back at this busy and exciting week, I can't help but feel that it's been an extraordinary one for our community.

NAS COMMUNITY

AlphaStream 5.0's testing program has undoubtedly been the highlight of this week. After the first round of tests was a huge success, we quickly started the second round of testing. What's even more exciting is that with the successful execution of the third trade signal during the second test, many of our friends have achieved remarkable results. These accomplishments not only show the potential of AlphaStream 5.0 but also highlight the execution power and intelligence of our community members. I want to extend my warmest congratulations to everyone who succeeded!

Of course, we also need to face some challenges. Some friends weren't able to keep up with all the trades due to busy work, and others didn't meet profit expectations due to unfamiliarity with the rules. But trust me, these are just small hiccups in the process of growth and will not hinder our path to success.

Investing is like a battle, full of challenges and opportunities. In the face of uncontrollable market volatility and our own shortcomings, all we can do is maintain a positive and optimistic attitude, continuously summarize our experiences, and improve our execution. Every little setback is a stepping stone for growth, and each review and reflection will bring us closer to our goals.

NAS COMMUNITY

Looking at today's performance of the three major indices, the market is still in a weak consolidation phase. As Daniel Robert mentioned earlier today, the gap below the three major indices is likely to be filled—it's just a matter of time. Right now, it's hard to find clear, high-probability opportunities in the stock market. Instead, it's more of a battle between individual stocks. The indices are likely to remain in a range-bound consolidation for a while.

In such a market environment, we need to think longer-term. Focusing on the new president's policies and searching for the next round of certain big opportunities should be our top priority. By gaining insights into policy changes and market trends, we can seize opportunities and position ourselves for next strategic profits.

Betting on Trump Loosening Regulations: Potential Investment Opportunities

The market generally expects that if Trump returns to office, he will adopt more relaxed regulatory policies. This prospect has sparked hope across several industries, particularly in financials, energy, and technology. The following areas have emerged as key investment focuses.

NAS COMMUNITY

Banking & Finance: Restoring Flexibility and Profitability

Loosening regulations could open up new opportunities for the banking sector. Lower compliance costs and increased liquidity would directly enhance profitability. Large banks may regain more loan flexibility, which would be a boost for the entire financial sector.

Energy Sector: Unleashing the Potential of Traditional Energy

Reducing restrictions on the traditional energy sector would unleash more production potential while lowering operating costs. Energy companies could achieve more efficient output at lower costs, boosting profits and improving shareholder returns. For investors, this is an excellent time to position in energy giants and undervalued energy stocks.

Cryptocurrency Market: New Growth Potential from Friendly Policies

With increased acceptance of blockchain technology and digital assets, the cryptocurrency industry could experience a major policy shift. More institutional investors may be encouraged to enter this field, injecting more capital and confidence into the market. Imagine how high Bitcoin and Ethereum could reach in a policy-friendly environment?

NAS COMMUNITY

Small Businesses and Startups: Unlocking Innovation Potential

If burdensome approval processes and excessive regulations are reduced, small businesses will enter a golden era. More funding will flow into innovation-driven companies, spurring a new wave of entrepreneurship. For investors, this opens up opportunities to discover emerging businesses and unicorn projects.

From the loosening of regulations to the current stock market responses, the most obvious profitable opportunity right now is in the crypto market. Whether it's the surge following our community's purchase of NAS tokens or the amazing returns from strategically positioning Bitcoin at \$60,000 and seeing it rise to \$100,000, these are real trades and big profits that our members have witnessed and participated in.

Looking back at these results, which has yielded higher returns than those stocks you were bullish on? The immense volatility and unparalleled growth potential of the cryptocurrency market are offering investors opportunities that traditional markets can't match.

NAS COMMUNITY

Friends, the market has already given us the answer with results. If you're still hesitating, ask yourself—are you ready to seize the next clear opportunity? The door to the cryptocurrency market is still wide open, and the next wave of opportunities is up to you!

While the three major indices remain in a consolidation phase, the crypto market continues to grab investors' attention. Bitcoin (BTC) is steadily climbing, and it's soon expected to hit the upper band of the daily Bollinger Band, with a breakthrough above \$100,000 just around the corner.

According to AlphaStream 5.0 data, a large amount of short positions has been trapped below \$85,000. As these funds stop-loss and exit, bullish forces may explode. In the short term, the likelihood of a significant Bitcoin adjustment is

NAS COMMUNITY

low, and the market may continue its slow upward movement. It's even possible for Bitcoin to break new historical highs in unexpected ways.

Being bullish on Bitcoin isn't just about being bullish on one asset; it's about being bullish on the future of the world economy. Bitcoin is gradually becoming a key component in the asset allocation of central banks around the world, and its status cannot be ignored. Plus, with the strong return of the "Crypto President," policy-friendly environments could trigger another massive surge in cryptocurrencies. This is one of the key reasons why the market is so confident about Bitcoin reaching above \$100,000.

Therefore, continuing to buy low and go long is one of the smartest trading strategies in the current crypto market. Seize every opportunity in the market fluctuations—Bitcoin's future is far from over. Friends, now is the time to act; don't let the opportunity slip through your fingers!

Fortunately, even though Bitcoin is currently at historical highs, the entire crypto market still holds enormous opportunities. More importantly, we have the strong support of AlphaStream 5.0's second test and investment learning plan, which provides a solid backing for our trading decisions.

NAS COMMUNITY

As I've previously stated, in confronting the uncertainties of the stock market, we've already made comprehensive preparations, including robust hedging strategies. This means that now isn't the time for undue worry but rather the moment to confidently embrace the future.

The key is to stay focused on the upcoming trading strategies. In the market, certain opportunities are fleeting, and hesitation equals missing out. Friends, remember, success only belongs to those who act decisively. Let's stay focused and seize every opportunity the market brings, making each step towards our goals more achievable!

Friends, please pay attention to the signals in the Telegram group. The 4th trading signal for this beta test has just been posted!

Right now, I'm sure many of you have the following three common questions in mind. Let me help you understand them better:

- 1. What is contract trading? What are the differences or advantages compared to spot trading?**

NAS COMMUNITY

2. How are we able to achieve rapid profit growth? How are gains and losses calculated?
3. Why do we choose CBF/USDT? What are its unique advantages?

Next, I will delve deeper into these key topics, helping you better understand and grab the current investment opportunities. Remember, action is the only way to achieve success—take this opportunity and let's move toward a brighter future together!

To better understand contract trading, we first need to grasp the basic rules of spot trading. By comparing the two, you'll quickly master the relevant investment knowledge.

Basic Rules of Spot Trading:

For example, when we directly purchase \$SMCI, or cryptocurrencies like BTC/USDT, NAS/USDT, etc., that is spot trading. Once purchased, you own these assets outright.

- **Pros: Simple and straightforward, suitable for long-term holding.**

NAS COMMUNITY

- **Cons:** Profits can only be made when prices rise, and you need to invest the entire principal, making it relatively less flexible and limiting capital efficiency.

The Basics of Contract Trading:

In contrast, when we trade pairs like BTC/USDT, CBF/USDT in the contract market, that's contract trading. The core of this is margin trading, which means you only need to invest a small amount of capital to control a larger position, potentially leading to higher returns.

- **Simply put:** Use a small amount of funds to control larger trades, potentially bringing expected or even greater profits.
- **More flexibility:** Contract trading allows for both long and short positions, meaning you can profit whether the market goes up or down.
- **Compared to options:** Compared to stock options, cryptocurrency contract trading has simpler rules and is easier to operate.

Let me walk you through the main features of cryptocurrency contract trading and explain, through examples, how to use this mechanism to achieve your investment goals.

NAS COMMUNITY

The key to investing is choosing the right tool, understanding its features, and using it flexibly. Through contract trading, you'll see a significant boost in capital efficiency and profitability. Stay on track and let's explore more potential opportunities together!

Unique Advantages of Crypto Futures Trading

1. Round-the-Clock Trading

The crypto market operates 24/7 without any opening or closing restrictions. This gives investors the freedom to trade anytime, removing time as a limiting factor.

2. High Volatility

Known for its high volatility, the crypto market offers abundant profit opportunities. This is one of the reasons why the AlphaStream 5.0 system thrives in this market. Higher volatility means more chances to capitalize on price swings, unlocking significant short-term returns.

NAS COMMUNITY

3. Dual-Sided Trading Mechanism

Whether the market is rising or falling, you can profit by going long (bullish) or short (bearish). This means there's potential to earn in any market condition.

4. Instant Execution and High Liquidity

Futures trading boasts exceptional liquidity with instant execution, making it far more efficient and flexible compared to the matchmaking system of spot markets. This maximizes capital efficiency.

5. Perpetual Contract Mechanism

Unlike options, perpetual contracts have no expiration date, allowing traders to hold their positions indefinitely until they choose to close them. This flexibility enables investors to adapt strategies based on market dynamics.

6. No Need to Hold “Heavy Assets”

Futures trading doesn't require owning the actual cryptocurrency. Instead, you're trading contracts tied to future prices. This lowers the entry barrier and eliminates the challenges of securely storing crypto assets.

NAS COMMUNITY

7. The Appeal of Leverage Trading

The cornerstone of futures trading lies in the margin mechanism. Through leverage, investors can use small amounts of capital to control large trades, amplifying their potential returns. With limited downside and unlimited profit potential, this feature makes futures trading highly attractive.

With its efficiency and flexibility, futures trading is drawing more and more investors. It's not just a strong complement to traditional spot trading but a powerful tool for fast profits in high-volatility markets. So, what are you waiting for? Seize the moment, leverage the AlphaStream 5.0 system, and uncover every investment miracle waiting for you!

Congratulations to everyone who followed the 4th trading signal in this test! You've successfully achieved over 60% in excess returns! This is undoubtedly a moment to celebrate, and it also serves as a reminder for us to truly value this rare opportunity.

Every signal from the AlphaStream 5.0 system is an important step toward stable profits and refining trading skills. It's not just about the returns, it's also

NAS COMMUNITY

a comprehensive test of trading discipline and execution. To ensure the accuracy and fairness of the test data, I've arranged for my assistant to periodically review everyone's trading records, helping us maintain the highest trading standards.

To help everyone better understand how the AlphaStream 5.0 system works, I plan to review the logic and execution process of this trade through charts. This will be an excellent learning opportunity for us to draw lessons from successful trades and better prepare for the next signal.

From the case I just shared, you should have realized that in order to achieve efficient profits in cryptocurrency contract trading, it's crucial to deeply learn the practical application of AlphaStream 5.0. This system is not just a tool, but a "mentor" that helps you find a steady and profitable approach in the market.

Next, I will use real data to show you how profits and losses are calculated in contract trading. This will help you gain a deeper understanding of how contract trading works, while laying a solid foundation for future investment success.

NAS COMMUNITY

Let's use a simple example to clearly illustrate the difference in returns between spot trading and contract trading:

Assuming I use 110 USDT to buy a certain investment product in spot trading at 6.4231 USD and sell it at 6.4635 USD.

The rate of return in spot trading is calculated as: $[(6.4635 - 6.4231) / 6.4231] * 100\% = 0.62898\%$.

The profit in spot trading is: $110 * 0.62898\% = 0.691878$ USDT.

If I use 110 USD to buy a 100X leverage contract for the same product:

Then, our rate of return will be multiplied by 100 from the original: $0.62898\% * 100\% = 62.898\%$.

The profit from the contract trading is: $110 * 62.898\% = 69.1878$ USDT.

NAS COMMUNITY

Based on the above calculation, we can conclude that the rate of return and actual profit in contract trading are 100 times higher than in spot trading! This explains the process of the three trading signals. At the COINFEEAI trading center, the unleveraged contract value for each contract trading product is 1000 USDT. Therefore, buying a 100X contract requires: $1000 / 100 = 10$ USDT. To purchase 11 contracts of 100X CBF/USDT, you would need 110 USDT. Through this simple leverage mechanism, we not only amplify our profits but also participate in larger market fluctuations with less capital. Additionally, the low transaction fees at the COINFEEAI trading center make every trade more efficient and cost-effective.

By using the highest-success-rate model in the AlphaStream 5.0 investment system, we can precisely seize deterministic contract trading opportunities, achieving significant short-term high returns. This is the core reason why every trade has generated excess returns in a short period since the first test plan. The entire trading process remains fast, efficient, and comfortable. This is not only a victory of technology but also a result of our collective effort and wisdom. Friends, don't miss every opportunity to make money and learn!

NAS COMMUNITY

AlphaStream 5.0 provides us with more than just a tool; it's the key to unlocking the door to wealth.

Let's continue exploring more profit secrets under the guidance of the system, and enjoy the excitement and sense of achievement that comes with investing. As for the friends who privately asked why we chose CBF/USDT as the trading pair, its unique value will be explained in detail later, so stay tuned!

After deeply analyzing CBF/USDT yesterday, I discovered a goldmine that's hard to miss! The volatility of this coin sometimes even surpasses that of BTC/USDT, which was one of the key factors that contributed to its 60% return in the first AlphaStream 5.0 test. Therefore, it has undoubtedly become the core focus of our second test.

As the native token of the trading platform, CBF/USDT holds immense potential for appreciation, very similar to Binance's BNB. Just think about it—BNB achieved an astonishing rise of 690,000% in just a few years! This isn't just a number; the value behind it is immeasurable.

NAS COMMUNITY

- **Early investors received significant discounts and enjoyed the optimized user experience provided by the platform.**
- **The connection between the platform and users became stronger, greatly enhancing user loyalty.**

The uniqueness of the native token, through mechanisms like token burning, continuously increases its market scarcity and appeal.

The native token is not just an asset; it represents the vitality of a platform and its potential for future growth. Unique tokens like CBF/USDT are typically exclusive to the trading center and are rarely found on other platforms. This is part of its value—when market recognition increases, its scarcity will become even more pronounced.

CBF/USDT is the core value of the COINFEEAI trading center. As the market continues to develop, we can easily imagine that more investors will see it as the perfect alternative after missing out on BNB. This is particularly worth the attention and strategic planning of all investors.

NAS COMMUNITY

Therefore, I firmly believe that now is the perfect time to invest in CBF/USDT!

As the AlphaStream 5.0 second test plan progresses, the inherent advantages of CBF/USDT are attracting more and more attention. More importantly, this focus indicates that its price and volatility will continue to rise, following the same logic as the rise of community tokens.

The key question is, will its contract trading value experience exponential growth? Based on the current trend, this possibility is very high. CBF/USDT, with its scarcity and platform support, is gradually becoming the focal point of the market. Friends, imagine this: when more traders turn their attention to it, are we standing on a path that could lead to incredible returns?

Learning Achievement Rewards - Earn Points

- 1. How much profit did you make from the recent trading signal? How was this profit calculated? Try to understand the method used in that signal.**
- 2. Why is the contract trading value of CBF/USDT so high? What attitude will you take towards the upcoming challenges?**

NAS COMMUNITY

To help everyone better understand the technical workings of AlphaStream 5.0, we've specially arranged an exciting technical course this Sunday afternoon. If you have time, don't miss it! This will be a great opportunity to dive deeper into learning and gain a more comprehensive understanding of the system's core features and application techniques.

I hope that each of you finds joy and growth every day here, as we work together to enhance our trading skills and achieve greater success. Wishing you all a wonderful weekend, and I look forward to seeing you in the course!
