**Eastern Time, March 3, 2025**

**9:30 AM**

**Professor Montgomery Keane (Helmsman)**

### **Morning Review**

**Good morning, team!**

**I am Montgomery Keane, your old friend. The world of investment has never been a gentle paradise, but a game for wise men. The key to continuous profitability is not whether you are right or wrong, but how much money you make when you are right and how much money you lose when you are wrong. If you see an opportunity, bet boldly, because good opportunities do not appear often. Wealth always gathers in the hands of decisive people, while hesitant people can only watch opportunities slip away. Wealth will never come to you on its own initiative, it only belongs to those who dare to act!**

**Looking at the current market, 2025 is known as the first year of cryptocurrencies, and the trillion-level ICO market has officially started. This is the most glorious moment since the crypto market craze in 2017. You may not like the crypto market, but you cannot deny the amazing profit effect it creates.**

**NAS COMMUNITY**

**Two months ago, when the U.S. stock market was trading sideways at a high level and the profit effect weakened, we decisively adjusted our strategy and recommended that everyone invest 90% of their funds in the crypto market and only leave 10% in the stock market. What is the result now? Under the leadership of AlphaStream 5.0, we have achieved returns in the contract trading market that far exceed those of the traditional stock market. If you insist on keeping your funds in the U.S. stock market, your returns will lag far behind our achievements in the crypto market.**

**Not to mention, TRUMP coin's 450x return in two days has completely shocked global investors, and high-quality IEO projects such as GEBT and QTPT have also created at least 15x growth. Now, we are standing in front of the last round of high-quality opportunities in the IEO project month - MDHT, which is one of the most certain investment opportunities at the moment. The general subscription progress bar finally stopped at 4503%, which means that the opening price will not be lower than \$112. MDHT's large chip capacity just shows its strong support for the project scale and market prospects.**

**NAS COMMUNITY**

Looking back at the entire MDHT IEO process, we've gone through public online subscription, GSC, and institutional allocation. Now, we are approaching the final phase before listing, Large Investor Allocation. However, I know that some of you still have questions about the relationship between the public subscription progress bar, GSC eligibility, and the Large Investor Allocation. This morning, I will provide an in-depth analysis to help you clearly understand why the Large Investor Allocation is our last chance to double and lock in profits!

Remember, there are no second chances in investing, only those who move first can win in the market! Now is the golden moment of the 2025 Crypto Era, will you be a market leader, or will you stand by and watch others build wealth? The choice is yours, and action is the only answer!

**NAS COMMUNITY**

**Friends, we all know that markets don't rise forever, when a trend lasts too long without a real correction, risk often builds up quietly. Take the Nasdaq's monthly chart as an example. Since April 2020, the index has been in a sustained uptrend, with only one major pullback at the end of 2021. Aside from that, it has barely seen any significant declines. However, technical indicators are now flashing clear warning signals, the BBands middle line is showing increasing resistance, and a high-level MACD bearish crossover is forming. A major correction is on the horizon.**

**The weakness of the Magnificent Seven has already signaled an impending market shift.**

**If you're only looking at the indices, you might not notice it yet but take a look at your portfolio and holdings. Is your profitability quietly shrinking? That's the market giving you a clear answer, when high-quality assets become too expensive and lose their value proposition, smart money starts exiting quietly. A market correction is no longer a question of if, but when.**

**NAS COMMUNITY**

On the fundamental side, Trump's tariff policies are once again shaking the markets. Starting March 4, imports from Canada and Mexico will face a 25% tariff, while Chinese imports will see an additional 10% tariff. At the same time, the U.S. is considering new tax policies on the EU, while the UK may be granted a trade exemption. This wave of tariff policies will not only drive up inflation but could also directly impact global economic growth, potentially pushing Mexico and Canada into recession. Faced with this complex landscape, the market is already starting to react.

NAS COMMUNITY

## BTC/USDT Weekly Candlestick Chart

✅ **Bitcoin's Drop, Our Golden Buying Opportunity!** Since January, Bitcoin has fallen over 25%, but real winners in the market never panic over short-term swings, they seize opportunities in the most valuable price zones! Our \$150,000 target for 2025 remains firm, and this correction is presenting the perfect mid-term entry point!

**NAS COMMUNITY**

**From a weekly chart perspective, the lower BBands are forming strong support at \$73,000. While market sentiment remains volatile, \$78,000 is likely the low for this bearish retracement. This is a classic case of sentiment leading technicals, smart money is accumulating, and a trend reversal is brewing!**

**Let's not forget, we perfectly timed the \$60,000 bottom, held strong, and witnessed Bitcoin's historic surge past \$100,000. This was all thanks to precise market judgment and unwavering execution!**

**🔥 Now, with MDHT set to launch on March 17, our capital will be unlocked and every profit must be strategically deployed into the most high-conviction assets! Looking ahead, Bitcoin isn't just a global safe-haven asset, it's becoming a strategic reserve for sovereign nations and institutions.**

**The market always rewards those who see further and act faster! Are you ready for this financial storm? When the next breakout comes, we'll be riding the wave to the top! 🚀 🔥**

**NAS COMMUNITY**

On Sunday, Trump made a major statement on social media, announcing that the U.S. will establish a "Crypto Strategic Reserve," with Bitcoin and Ethereum as core reserve assets, alongside XRP, Solana (SOL), and Cardano (ADA). This announcement triggered a surge in market sentiment, driving crypto assets higher!

#### **The Market Reacts Strongly, Digital Assets Surge!**

Right after the announcement, the market immediately responded:

-  **XRP surged 33% in a short time!**
-  **Solana (SOL) skyrocketed 22%!**
-  **Cardano (ADA) jumped over 60%!**
-  **Bitcoin (BTC) spiked by \$10,000, approaching \$95,000 at its peak!**

**NAS COMMUNITY**

**Trump made his stance on the crypto market crystal clear in his statement:**

**"For years, the Biden administration has unfairly suppressed the crypto industry, but the U.S. Crypto Reserve will bring true prosperity to this crucial sector! I will ensure that America becomes the world's crypto capital! Bitcoin and Ethereum will be at the core of the U.S. Crypto Reserve."**

**Why Is This Announcement So Important?**

**This marks the first time Trump has explicitly supported the creation of a "Crypto Strategic Reserve", not just holding crypto as inventory, but actively accumulating digital assets. This means the U.S. government will systematically and strategically acquire crypto rather than just passively holding existing assets. This policy shift sends a powerful message to the market, crypto is poised to become a fundamental pillar of the U.S. financial system!**

**This move solidifies Bitcoin and other major digital assets as long-term value anchors, ensuring strong institutional demand. We are witnessing one of the most significant policy shifts in crypto history, and global investors are now refocusing on this digital currency revolution!**

**NAS COMMUNITY**

**And now, what's the most exciting opportunity in the market?**

**A trillion-dollar ICO market is emerging! This isn't just the defining opportunity of 2025's "Crypto Year One", it's the gateway to the next wealth explosion. Among all token launch models, IEOs stand out as the most secure and high-certainty opportunities!**

**If Trump reaffirms the 2025 crypto market boom, these top-tier IEO projects could see explosive growth, potentially replicating the legendary 2017 ICO market rally! Smart investors are already making their moves, are you ready to position yourself at the forefront of this new wealth wave? 🚀 🔥**

**✅ Capital is flowing into high-quality crypto projects, IEOs are the biggest winners! MDHT's institutional allocation was fully subscribed in less than 4 hours, this is not just a strong endorsement of MDHT, but also a reaffirmation of the value of the IEO market. As stock market risks increase and tariff uncertainties grow, smart money seeks certainty and right now, IEOs are the most certain investment track of this era!**

**NAS COMMUNITY**

✓ The U.S. dollar saw a slight uptick, while the 10year Treasury yield dropped to 4.23%, its lowest level since December. This signals that the market is shifting into risk-off mode. As risk aversion rises and market uncertainty intensifies, we must seek investment tracks that are both stable and have strong growth potential!

In the face of current market uncertainty, the most important thing for investors is to avoid policy risks and seize high-certainty opportunities. Clinging to past stock market profit myths could soon lead to being left behind by the market. Smart investors don't stand in the eye of the storm, they adjust their positions early and shift toward sectors with greater growth potential.

Friends, the wave of the 2025 crypto market has arrived, and MDHT is at the forefront of this revolution! When the market is filled with uncertainty, we must focus on high-certainty opportunities and move with the trend, only then can we stand among the winners! 🙌🚀

## NAS COMMUNITY

served!

### Allocation Details

◆ Token Name: MDHT

◆ Allocation Period:

📍 Start Time: Eastern Time (ET) February 27, 2025, 12:10 PM

📍 End Time: Eastern Time (ET) March 15, 2025, 11:50 PM

◆ Total Allocation: 120,000,000 tokens (limited availability)

◆ Subscription Price: 3.5 USDT per token

◆ Maximum Subscription per Order: 1,200,000 tokens

◆ Minimum Subscription per Order: 150,000 tokens

### ⚡ Participation Requirements & Rules

1 Exclusive for High-Tier Investors – Only investors with at least 200,000 USDT in online regular subscriptions are eligible to participate

## 5.2 Token distribution model

- Token name: MDHT
- Total supply: 1 billion tokens
- IDO: 30% (online subscription and allocation. Online subscription accounts for 20% and allocation accounts for 80%)
- Team: 5%
- Marketing: 10%
- Base: 15%
- Mining: 40%

**NAS COMMUNITY**

**The public online subscription progress bar finalized at 4503%, this is not only direct proof of overwhelming market demand but also the strongest endorsement of MDHT's value! 🚀🔥🚀🔥**

**In our previous in-depth analysis, MDHT has already been proven to be one of the most promising IEO projects in the 2025 crypto market. Its core driving force, MindHub is leveraging the “AI + Humanoid Robotics + Metaverse” triad strategy, aiming to become a \$30 billion tech unicorn.**

**While Silicon Valley's big tech firms are still debating the future of AI and the Metaverse, MindHub has already merged the two, driving commercialization and creating a true real-world value engine. This isn't just technological innovation, it's a complete reshaping of the industry landscape. The market has already given its answer, MDHT's public subscription progress bar finalized at 4503%!**

**What does this mean?**

**NAS COMMUNITY**

- ✓ **The opening price will not be lower than \$112, this is already a guaranteed fact.**
- ✓ **With market sentiment premiums factored in, the actual opening price could be significantly higher!**
- ✓ **Once the Institutional and Large Investor Allocation progress bar reaches 100%, all tokens will be fully distributed. While this won't impact the initial listing price, it will directly shape the market trend in the post-launch phase.**

**The high participation of institutions and large investors is the most direct reflection of the market's confidence in MDHT! The higher the institutional and large investor holding ratio, the lower the price volatility after listing, ensuring a more stable price trend. This is exactly why top investors never miss opportunities like this, they aren't just focused on short-term gains, but on the steady long-term growth of real value!**

**🔴 The Relationship Between GSC and the Large Investor Allocation: Why Does the Large Investor Allocation Further Dilute the Winning Shares of All Early MDHT Subscriptions?**

**NAS COMMUNITY**

Dear NAS Family, when an opportunity arises, we must not only seize it but also deeply understand its essence! 💡

Today, we will analyze the deeper logic behind GSC and the Large Investor Allocation and why the launch of the Large Investor Allocation directly impacts the winning ratio of all early MDHT subscriptions. This isn't just theory, it directly affects the investment returns of every one of us! 🚀

- **Total MDHT supply: 1 billion tokens**
- **Total IEO allocation: 300 million tokens (30% of total supply)**
- **Public online subscription: 60 million tokens (20% of IEO allocation)**
- **Allocation mechanism: 210 million tokens (80% of IEO allocation), shifting offline distribution to online to ensure fairness and transparency.**

Once the public subscription progress bar surpassed 100%, we entered a zero-risk subscription zone. However, as market demand skyrocketed, the progress bar ultimately locked at 4503%, significantly reducing the average winning rate for public subscriptions. Recognizing the situation, our community acted decisively, leveraging our fund pool advantage to negotiate with the exchange, successfully securing 30 million GSC tokens with a 15%-45% allocation ratio. At

**NAS COMMUNITY**

the time, we believed GSC was the best possible solution. But then, the MDHT team introduced Institutional and Large Investor Allocations, further expanding the IEO allocation to 210 million tokens! What does this mean? 🙋

### 🎯 Institutional + Large Investor Allocation: An Advantage or a Challenge?

The MDHT team strategically expanded the IEO allocation, fully opening it to the market. This not only significantly increased the fundraising scale but also elevated MDHT's market influence to a new level. For us, this is a double-edged sword:

- **▲ Advantage:** Deep participation from institutions and large investors signals strong long-term confidence in MDHT, ensuring a more stable price after listing, without the extreme volatility seen in retail-driven projects.
- **▼ Challenge:** With institutional and large investor allocations reaching 210 million tokens, far exceeding the 60 million tokens in public subscription, this will inevitably dilute the winning allocation for all early participants, including GSC!

**NAS COMMUNITY**

### **Why Is the GSC Allocation Ratio Being Diluted?**

The reasoning is straightforward, MDHT's IEO strategy is dynamically adjusted to maximize market value. Once the public subscription progress bar locked at 4503%, the market had already reached a strong consensus on MDHT's value. In response, the project team strategically released the remaining IEO allocation to further enhance fundraising capacity and market influence. Friends, this is crucial to understand: The GSC 15%-45% allocation ratio was originally based on the 60 million tokens allocated for public subscription. However, with an additional 210 million tokens now allocated to Institutional and Large Investor Placement, this means:

 Your GSC allocation ratio will be further diluted as the Large Investor Allocation fills up, potentially dropping to around 2% or even lower.

But here's the problem, Institutional Allocation + Large Investor Allocation now totals 210 million tokens!

- This means the circulating IEO supply has increased by 3.5x, compared to the previous 60 million tokens allocated for public subscription.

**NAS COMMUNITY**

- The newly added institutional and large investor capital now holds a significantly larger share, which directly dilutes the winning allocation for all early public subscribers, including GSC holders!

### 🚩 A Simple Example

Imagine you own 10% of a company's shares, but the company issues new shares. As a result, your ownership percentage is automatically diluted. If you don't increase your holdings, the value of your shares will be reduced!

The same logic applies to the Large Investor Allocation, which directly impacts GSC's allocation ratio because:

- GSC's allocation ratio was originally calculated based on the 60 million tokens from the public subscription. Now, with an additional 210 million tokens allocated to institutions and large investors, dilution is inevitable.
- If you hold GSC but don't participate in the Large Investor Allocation, your actual winning ratio will shrink even further—potentially dropping below 2%!

**NAS COMMUNITY**

**Fortunately, with the advantage of the capital pool, the average amount of funds for a single UID in our community has already exceeded the minimum entry threshold of \$200,000 for large investor allocation, which means that all GSC and ordinary subscription participants can participate in large investor allocation! Through large investor allocation, your GSC will jump directly from 15%-45% to 100% allocation! Not only that, participating in large investor allocation can also ensure that your ordinary subscription shares will not be further diluted!**

**So now, the question isn't "Should I participate in the Large Investor Allocation?", it's "How much should I subscribe?" 🎯 This isn't just about whether your GSC allocation will increase from 15%-45% to a full 100%, it's about whether your overall winning ratio can return to a higher level!**

**NAS COMMUNITY**

**🚀 Optimal Strategy:**

**1. For those who have already purchased GSC, the Large Investor Allocation is your best opportunity to increase your holdings. Not only will you secure 100% allocation in the Large Investor round, but it will also boost your GSC final allocation ratio to 100%! For example, if you purchased \$1 million worth of GSC but only received a 30% allocation, joining the Large Investor Allocation will instantly increase your allocation to 100%! Isn't this an unexpected bonus?**

**2. For those who haven't participated in GSC yet, this is your last chance to catch up! By joining the Large Investor Allocation, your allocation will instantly reach 100%, ensuring you aren't left behind by the market! For those with larger capital, this is the final opportunity to participate. If you missed the GSC maximum allocation, don't make the same mistake with the Large Investor Allocation! 💰🔥**

**3. For those who received a low allocation in the public subscription and want to secure a higher share, the Large Investor Allocation is the only solution!**

**NAS COMMUNITY**

 **This is a battle of certainty, what should we do?**

**The demand for MDHT has far exceeded our expectations, the 90 million tokens allocated to institutions were fully subscribed in just 4 hours, proving overwhelming market confidence! Now, the Large Investor Allocation is accelerating, and market enthusiasm continues to rise! Ask yourself, under these conditions, is there any chance the Large Investor Allocation will fail? Almost impossible! This means:**

- **If you don't participate in the Large Investor Allocation, your GSC allocation will be further diluted.**
- **If you rely solely on the public subscription, your winning ratio will drop below 2%.**
- **If you seize the Large Investor Allocation, you will secure a 100% allocation and maximize your investment returns!**

**The opportunity is right in front of you, this could be the most secure and certain wealth opportunity of 2025! Friends, don't let hesitation hold you back, secure your place in the Large Investor Allocation and maximize your investment value!**

**NAS COMMUNITY**

**The market won't wait for hesitation, if you're still deciding whether to participate, you may have already missed out! The question isn't "Should I join the Large Investor Allocation?", it's "How much should I subscribe?". Time is limited, seize the opportunity, secure a 100% allocation, and make the MDHT battle your most successful investment decision of 2025!**

**AI 5.0**

**NAS COMMUNITY**

**Eastern Time, March 3, 2025**

**3:30 PM**

**Daniel Robert**

**Closing Commentary ( $\alpha$  &  $\beta$  Strategy)**

**Good afternoon, members of the community!**

**I'm Daniel Robert, and this morning, the Helmsman's insights once again ignited our fighting spirit! He provided an in-depth analysis of the opportunities and challenges MDHT currently faces, with a particular focus on the launch of the Large Investor Allocation. Many early participants in GSC may be feeling the "pressure," but let me tell you, this pressure is a blessing!**

**Think about it, rather than hesitating and missing out on this opportunity because of "pressure," why not see it as an even greater chance, take decisive action, and secure your own victory? Don't forget, this is one of the most certain opportunities in the market right now! This is the moment that tests your decision-making, will you think like an institute, act decisively, and take control?**

**NAS COMMUNITY**

**Or will you hesitate like a retail investor and be led by the market? Choice is what determines everything, not just empty talk about effort.**

**As the Helmsman said, don't just listen to what the institutes say, watch what they do! A \$90 million institutional allocation was snapped up in less than 4hr! This is the market's most genuine signal, this is the choice of the institutes!**

**So, the question now isn't whether to participate, but rather, can you seize this opportunity, stand on the same side as the institutes, and become a market leader instead of a passive follower? 🚀 🔥**

**NAS COMMUNITY**

**🔥 Market sentiment has shifted, and the VIX Fear Index is sending a clear signal!**

**Looking at the daily candlestick chart of the VIX, the index consolidated around 16 before breaking out sharply to the upside. This aligns perfectly with our expectations and confirms one thing, the bullish sentiment in the market is gradually unraveling, while risk aversion is on the rise!**

**Looking at the current trends of the three major U.S. stock indices, it's easy to see why volatility is likely to persist. The market lacks sufficient momentum to drive a strong breakout to the upside. Whether from a fundamental or technical perspective, U.S. stocks are struggling to support a new wave of strong gains.**

**The Trump administration's trade war policies continue, the Federal Reserve's rate-cut path remains uncertain, and the earnings growth of the Magnificent Seven has slowed. The market is struggling to find new bullish catalysts, while institutional funds continue to flow out, and risk aversion is becoming the dominant force.**

**NAS COMMUNITY**

**In stark contrast to the U.S. stock market, the crypto market is booming!**

**Not only is the profitability effect in crypto significant, but policy sentiment is also shifting, and institutional funds are flowing in at an accelerating pace!**

**At this pivotal moment of market sentiment shift, smart money has already started moving to a new battleground. Will you stay in the sluggish U.S. stock market, or will you decisively enter the market with the strongest profitability effect? This is the real question every investor should be asking! 🚀 🔥**

**🔥 Bitcoin stages a stunning overnight comeback! Surges past \$93,000 as former President Trump and BlackRock fuel the rally! 🔥**

**Last night, Bitcoin delivered a spectacular rebound! In just a few hours, its price skyrocketed from the lows, smashing through \$93,000 and catching the market off guard. But the even bigger news, The White House is set to hold its first-ever crypto summit this Friday, and ahead of the event, Trump unexpectedly mentioned the U.S. Bitcoin Strategic Reserve (SBR), igniting market sentiment!**

**NAS COMMUNITY**

**At the same time, Wall Street's largest asset management giant, BlackRock has officially announced that Bitcoin will be included in its \$150 billion model investment portfolios! This means the world's most powerful capital is accelerating its allocation into Bitcoin and all of this is happening right after Bitcoin's period of "low volatility and consolidation"!**

**🚀 Trump Fuels the Rally! Major Shift Ahead for the U.S. Bitcoin Strategic Reserve (SBR)!**

**Ahead of the White House summit, Trump revealed that a significant adjustment to the U.S. Bitcoin Strategic Reserve (SBR) is highly likely! In addition to Bitcoin (BTC) and Ethereum (ETH), Solana (SOL), Ripple (XRP), and Cardano (ADA) are set to be added as reserve assets!**

**This isn't just a policy discussion, it's a direct signal that the U.S. government is considering integrating crypto assets as part of its national strategy!**

**NAS COMMUNITY**

**💡 Wall Street's Top Capital Moves, BlackRock "Perfectly Times" Bitcoin ETF Buy-in!**

According to Bloomberg, BlackRock is increasing its allocation by 1% to 2% in its \$48 billion iShares Bitcoin Spot ETF (IBIT). Don't underestimate this percentage, this is part of BlackRock's \$150 billion model investment portfolios, and their capital adjustments often unleash massive market liquidity!

The core logic of model investment portfolios is to bundle capital into strategic allocations and offer them to financial advisors, funds, and institutional investors. Once the allocation shifts, capital flows can multiply exponentially! And just before BlackRock made its move, the Bitcoin market was still in a phase of volatility and stagnation. This kind of precise positioning is no coincidence!

**📊 Market Insight: Bitcoin Surge + Wall Street Backing, Is the Real Bull Market Here?**

Right after Trump announced on social media that the U.S. plans to include BTC, ETH, XRP, SOL, and ADA in its national strategic reserves, Bitcoin immediately captured market attention, soaring 20% in just 24 hours, rocketing from last week's dip below \$80,000 to \$93,000!

**NAS COMMUNITY**

🔍 While Trump hasn't disclosed the specific operational details of the SBR, the market doesn't need details, it thrives on sentiment and signals! This announcement alone was enough to reignite hope among crypto bulls who were in despair just last week, completely flipping market sentiment!

🌟 A reality is staring us in the face: When the President and Wall Street rally behind the market, can prices really go back down?

Whether you're a retail investor, an institution, or a seasoned crypto veteran, you have to admit, this Bitcoin surge is far more than just a technical rebound. It's the result of a powerful convergence between politics and capital!

🔥 The question is no longer whether Bitcoin will keep rising, it's whether you are ready for the next crypto super bull market? 🚀 More importantly, Trump is pushing for the U.S. to become the global crypto capital, and the most crucial step in that plan is reviving the golden era of ICOs from the 2017 crypto boom!

**NAS COMMUNITY**

Look at the market shift, smart money has already started moving. The 450x surge in TRUMP token within just two days has completely reignited expectations for a new wave of ICOs! But this time, institutional focus is no longer on scattered speculation, it's locked in on high-quality IEO projects!

💡 **Why? Because IEOs are becoming the next major opportunity for institutional capital!**

🚀 **Bitcoin's surge has ignited market sentiment, and now, massive capital is searching for the next breakout opportunity!**

🚀 **IEOs offer a more transparent and secure investment environment, making top-tier projects the core attraction for capital inflows!**

🚀 **As market frenzy returns, the direction of capital is already set, the most promising and institutionally favored IEO projects will become the absolute focal point of the crypto market!**

**NAS COMMUNITY**

✨ The opportunity is right in front of you, and the market's direction has completely shifted! Are you still waiting, or will you take decisive action and seize this wave of wealth? 🚀 🔥

🔥 The MDHT Large Investor Allocation progress bar has surpassed 20%, meaning less than 80% of the quota remains! According to the official announcement, MDHT will release the winning allocation results on March 15 and officially launch for trading on March 17. The subscription window for the Large Investor Allocation is now in its final sprint, there are less than 15 days left!

MDHT's launch of the institutional and Large Investor Allocation was not a random decision but one based on principles of fairness and market integrity. This is not just a simple subscription opportunity, it is a precise market strategy adjustment. The original offline allocation has been strategically shifted online, ensuring long-term market stability and healthy growth. This move prevents early-stage token distribution imbalances and further optimizes the market ecosystem.

**NAS COMMUNITY**

When the subscription progress bar surged to 4,503%, the profit cushion was already established. But the real issue lies in the concentration of tokens in too few hands, this could severely impact liquidity and directly determine MDHT's market performance after listing. MDHT's strategy is crystal clear, attract more institutional and large investor capital to ensure market stability while preventing retail investors from triggering extreme price swings with concentrated sell-offs at launch. This approach not only secures MDHT's price stability but also fosters healthy market growth, with deep institutional involvement providing strong confidence in the entire project.

The logic behind this is simple, every successful market rally requires synergy between institutions, large investors, and retail participants. If the circulating supply is too fragmented, price volatility will be more extreme but if it's too concentrated, the market will lack sufficient trading depth, limiting liquidity and preventing sustainable price growth. That's why MDHT has adopted a more optimized strategy, attracting long-term capital into the market to strengthen the overall market structure. This ensures that prices have sustained upward momentum rather than being manipulated by short-term speculative funds through rapid pumps and dumps.

## **NAS COMMUNITY**

**For our NAS community, this strategy actually amplifies our fund pool advantage even further. If an individual investor subscribes for less than \$200,000, they wouldn't qualify for the Large Investor Allocation or enjoy the 100% allocation ratio. But our community operates differently, we leverage a pooled fund approach to consolidate strength, ensuring that the average capital per UID far exceeds the minimum entry threshold for the Large Investor Allocation. This means that every member can secure a higher allocation ratio.**

**I understand that many of you have mixed feelings about the launch of the Large Investor Allocation, especially those who recently purchased GSC. Some may feel it's unfair, "Wasn't GSC supposed to have a 15%-45% allocation? Why do we now need to participate in the Large Investor Allocation?" In reality, this follows fundamental market principles. It's just like a company issuing new shares, if you don't increase your holdings, your ownership percentage naturally gets diluted. The same logic applies here. The institutional and Large Investor Allocation introduced an additional 210 million MDHT, far exceeding the 60 million allocated for regular online subscriptions. This means that both regular subscriptions and GSC allocations will face further dilution. You may feel this is unfair, but the real question is, will you passively allow your share to shrink, or will you take proactive action to secure your market position?**

**NAS COMMUNITY**

**In the investment market, truly smart investors don't let emotions dictate their decisions, they choose the most advantageous course of action. If you want to maintain or even expand your holdings, the only option is to join the Large Investor Allocation! Your GSC allocation ratio will jump from 15%-45% directly to 100%! You have two choices, either stay on the sidelines and watch your share shrink, or take decisive action to ensure you always remain in the strongest position.**

**Of course, there is a theoretical alternative, if the Large Investor Allocation isn't fully subscribed within the designated timeframe, the dilution of GSC's allocation ratio might not be as significant. But let's be honest, that scenario is almost impossible. The institutional allocation sold out in less than 4hr, with 90 million MDHT snapped up instantly. Meanwhile, the Large Investor Allocation progress bar is advancing rapidly. The market's enthusiasm has already sent a clear signal, large capital is aggressively buying in! This is a certainty, it won't pause just because you hesitate. But with decisive action, you can secure even greater returns!**

**NAS COMMUNITY**

**I have always believed that when faced with a high-certainty, low-risk, historic investment opportunity, the smartest strategy is to act decisively! If you have the financial capacity to secure the maximum allocation in the Large Investor Allocation, don't hesitate, take it! In comparison, the cost of inaction far outweighs the cost of taking action. The market doesn't wait for spectators, the real winners are always those who make bold decisions at critical moments and secure victory in advance! 🔥🚀**

**🔥 The path of investing is filled with challenges, but the true winners are always those who dare to face them head-on! Everyone encounters obstacles on their investment journey, the climb to the top is never easy, and the closer you get to the peak, the fiercer the competition becomes. But your success is not determined by the difficulties you face, it is determined by your attitude. When confronted with challenges, you can choose to retreat, or you can choose to break through. Only those who are bold, decisive, and unafraid of adversity can truly stand at the summit of victory!**

**NAS COMMUNITY**

**Is MDHT's Large Investor Allocation an obstacle or an opportunity for you? The answer depends entirely on your choice. If you see it as a barrier, you'll remain stuck in place. But if you treat it as a stepping stone to success, it will become the key opportunity that propels you toward greater wealth! The market has already sent the clearest signal, smart money has already moved. The only question is, are you willing to seize this golden opportunity with me, rise to the top, and claim victory in our Battle of King?**

**🚀 Victory never belongs to those who hesitate, only those who dare to take action can ultimately take control! I'm already on the move, folks. I look forward to fighting alongside you as we charge toward the top! 🔥**

**AI 5.0**
