Professor Montgomery Keane (Helmsman)

Morning Review

Good morning, team!

I'm Montgomery Keane, your long-time friend. A new week has begun. Are you ready to take on the challenge? In this world, everyone is searching for the secret to success, but the real answer is simple. When opportunity knocks, are you fully prepared?

I'd rather regret the things I've done than spend my life regretting missed opportunities. Winning isn't hard because everyone wants success. But what truly determines the outcome is whether you're willing to go all in and prepare thoroughly. Success never belongs to the hesitant, it favors those who embrace challenges and act decisively.

NAS COMMUNITY

Opportunities are fleeting, we can't afford to wait. We must be ready before they even arrive. Have you ever experienced the regret of watching the market explode, seeing others make incredible gains while you hesitated and missed out? If so, then this time, don't let history repeat itself!

Are you ready to claim your victory?

Earlier, you secured your MDHT IEO regular allocation and locked in your GSC security key. And now, the door to large investor allocation is officially open, with a final deadline this Saturday! This is your chance to change your investment tier, this is your turning point from a normal investor to a higher tier.

The market won't give us unlimited opportunities, we must seize every moment of certainty with full force and without hesitation! Success isn't about waiting, it's about taking action! Wealth doesn't just happen, it's the result of decisive moves made over and over again! If you're still hesitating at this moment, ask yourself: If you miss out today, will you be able to live with that regret? If you recognize the certainty of this market, are you willing to ALL IN and fight for your future?

NAS COMMUNITY

Friends, this isn't just an investment opportunity, it's a life-changing decision about your financial future! This isn't just a subscription, it's your journey from retail investor to high-net-worth investor! This isn't just an action, it's your turning point toward a new financial reality!

Now is the time to eliminate doubt and take action! For your financial freedom, for your dreams, for the future you envision, let's move forward with unwavering conviction and go all in! 🚀 🔥

Over the past few weeks, we've explored three critical topics:

- ✅ **How large investor allocation serves as a turning point for token value**
- ✅ **MDHT's robust risk management mechanisms that ensure long-term market stability**
- ✅ **The deep connection between large investor allocation and the Green Special Channel (GSC)**

NAS COMMUNITY

In this process, I saw that some of our friends have expressed concerns about GSC allocations being diluted due to the large investor allocation. This reaction is understandable, but a winner's mindset is about seeing the bigger opportunity, not dwelling on short-term fluctuations! The facts are clear, institutional allocation sold out in just 4 hours and large investor allocation is moving fast. This proves the market's recognition of MDHT and solidifies its long-term value!

Last weekend, I received countless messages from members eager to understand the details of large investor allocation and how to maximize their allocation. There is no doubt that the smart money in the market has begun to take action, and we must seize it before the opportunity disappears completely!

However, I've also noticed that some members still don't fully grasp the core advantages of large investor allocation, some of them are even still unsure whether to participate. Friends, this is a zero-risk, guaranteed-profit opportunity. Hesitation only leads to missed chances!

NAS COMMUNITY

So this morning, I will provide a full breakdown. Follow me closely, keep an open mind, and get ready to seize this life-changing investment opportunity! In the world of investment, success never belongs to those who are indecisive, but to those who have advance awareness, precise planning, and dare to act decisively!

Today, we're not just talking about a regular investment today. We're standing at a pivotal moment that could redefine our financial futures. Large investor allocation isn't just a subscription instead it's a battle for financial supremacy!

We'll dive into:

- ✓ Why large investor allocation is the most strategic and guaranteed opportunity in this IEO?**
- ✓ How to use this allocation to maximize your allocation and amplify your profits?**
- ✓ Why smart money is already making moves, and why we must follow suit?**

NAS COMMUNITY

What's the essence of wealth? It's recognizing trends ahead of time and positioning yourself before they explode!

This large investors allocation not only allows us to lock in excess returns before the market starts, but also provides an opportunity for you to upgrade your investment status from a normal participant to a true capital player!

I hope that you are not just a spectator in the market, but a real winner who stands at the forefront and welcomes this capital feast! Let us enter the battle state now and be fully prepared for the upcoming harvest! 🚀🔥

NAS COMMUNITY

Last week, we conducted an in-depth analysis of the challenges facing the stock market. Many have asked, “Since the stock market correction has already begun and every rebound is a selling opportunity, why is the crypto market also declining?” The fact is, if you compare the daily candlestick charts of the S&P 500 and Bitcoin, you’ll notice that both exhibit a classic downtrend pattern.

 **The high valuation of U.S. stocks makes a correction inevitable**

Tech giants, led by the Magnificent Seven, have reached historical highs. With market valuations at extreme levels, a correction is only natural. Once the monthly-level correction is complete, the stock market will present real buying opportunities.

NAS COMMUNITY

 **Bitcoin's pullback is a strategic buying opportunity**

The world knows that the U.S. has officially included Bitcoin in its strategic reserves. However, this doesn't mean Bitcoin will immediately skyrocket. Instead, the market's technical correction provides an ideal low-entry point for long-term capital. This is the best time for smart money to enter, rather than chasing the highs when the market turns euphoric.

 **For us, this is a once-in-a-lifetime strategic investment opportunity!**

The decline in both stocks and Bitcoin has created a perfect window for those participating in the MDHT IEO. Why?

✓ MDHT is about to list, we can lock in profits at market highs, securing the most certain gains rather than relying on speculative price movements.

✓ With profits unlocked, we can reinvest in crypto futures trading, amplifying returns while gradually building Bitcoin positions at strategic buy zones in preparation for the next bull market.

NAS COMMUNITY

✓ Once the stock market correction is over, we can reinvest these profits into high-quality stocks, positioning ourselves for the next rally.

✓ This is not just an investment strategy, it's a true capital allocation plan!

Successful investors will never get distracted by short-term volatility. Instead, they maintain a clear strategic vision and make decisive moves at the right time! When the market is in fear, we have already positioned ourselves. When the market rebounds, we will be reaping the rewards!

🚀 **The Power of Large Investor Allocation: From Uber, Airbnb to MDHT, when Uber went public in 2019, the market had high expectations, but its IPO was far from smooth. Before listing, Uber conducted large investor allocation, prioritizing institutional investors. Why? Because institutional capital determines market stability. Similarly, when Airbnb went public in 2020, 75% of IPO shares were locked by institutions, ensuring price stability. In contrast, Robinhood allocated more shares to retail investors, resulting in a disastrous debut, falling 8.4% on its first day, closing at \$34.82. These two cases prove the critical role of institutional allocations, not only do they stabilize market demand, but they also lay a solid foundation for post-listing price performance.**

NAS COMMUNITY

◆ **Four Key Advantages of Institutional & Large Investor Allocation**

1. **Stabilize market demand and ensure a strong opening. Institutional participation acts as a stabilizing force for the market. Before Uber's IPO, top hedge funds and mutual funds invested heavily, ensuring strong demand at listing and there will be no drastic fluctuations. Similarly, in the IEO of the crypto market, the regular subscription progress bar of MDHT determines the listing price, but as the subscription demand surges, the winning rate continues to decrease, even if you participate in the Green Special Channel. Even with Green Special Channel (GSC) access, individual allocations are further diluted by large investor allocation. Therefore, participating in large investor allocation is the only way to guarantee your full allocation and ensure you're positioned among the market's winners.**

2. **Boosting Market Confidence & Attracting More Investors**

Institutional participation isn't just financial backing, it's a vote of confidence. Before Airbnb's IPO, its pricing range was raised from \$44-\$50 to \$68, yet institutional investors still snapped up every share. That's the power of market confidence! Similarly, in MDHT's IEO, institutional allocation sold out in under 4 hours. This overwhelming demand proves MDHT's high market recognition, and

NAS COMMUNITY

the opening of large investor allocation will further strengthen confidence in MDHT's post-listing performance.

3. Optimizing Pricing & Ensuring Long-Term Growth

IPO pricing is often a collaborative effort among institutions, preventing excessive volatility. Uber's IPO was priced conservatively, but thanks to its institutional backing, its stock remained relatively stable post-listing. The crypto market follows the same principle. In MDHT's IEO, demand for regular allocation skyrocketed, pushing up listing valuations. However, as demand surges, individual allocation rates keep dropping. In this case, participating in large investor allocation ensures you maintain an optimal market position and avoid dilution.

4. Reducing Sell Pressure & Maximizing Returns

The biggest feature of institutional investors is the longer holding period, it's avoids the sell-off in the early stage of listing and supports the steady rise of stock prices. The successful listing of Uber and Airbnb have proved that large investor allocation reduce market uncertainty. And in crypto market, MDHT's large investor allocation strategy not only ensures the stability of listing, but more importantly, there is no time lock-up period for the large investor allocation

NAS COMMUNITY

amount. Investors can sell MDHT at any time after listing, lock in profits at the first time, and maximize returns.

- ◆ **Large Investor Allocation: The Only Way to Secure a Winning Position**

Whether in traditional markets or crypto markets, the core value of large investor allocation is to ensure market stability while maximizing returns for early investors. For growing companies like Uber, large investor allocation help them reduce risks during the IPO process and lay the foundation for long-term development. In crypto market, MDHT's large investor allocation will play a similar role, ensuring the successful listing of projects while creating generous returns for participants.

- ◆ **Action Determines the Future! Now Is the Best Time to Secure 100% Allocation! Friends, the market only rewards action-takers! Today, we stand at a once-in-a-lifetime market opportunity, choosing large investor allocation means securing a guaranteed win. Those who missed out on Robinhood's IPO still regret it today. Those who invested early in Uber and Airbnb's IPOs have already made fortunes. Now, we have the chance to secure MDHT's large investor allocation. Will you hesitate or act decisively?**

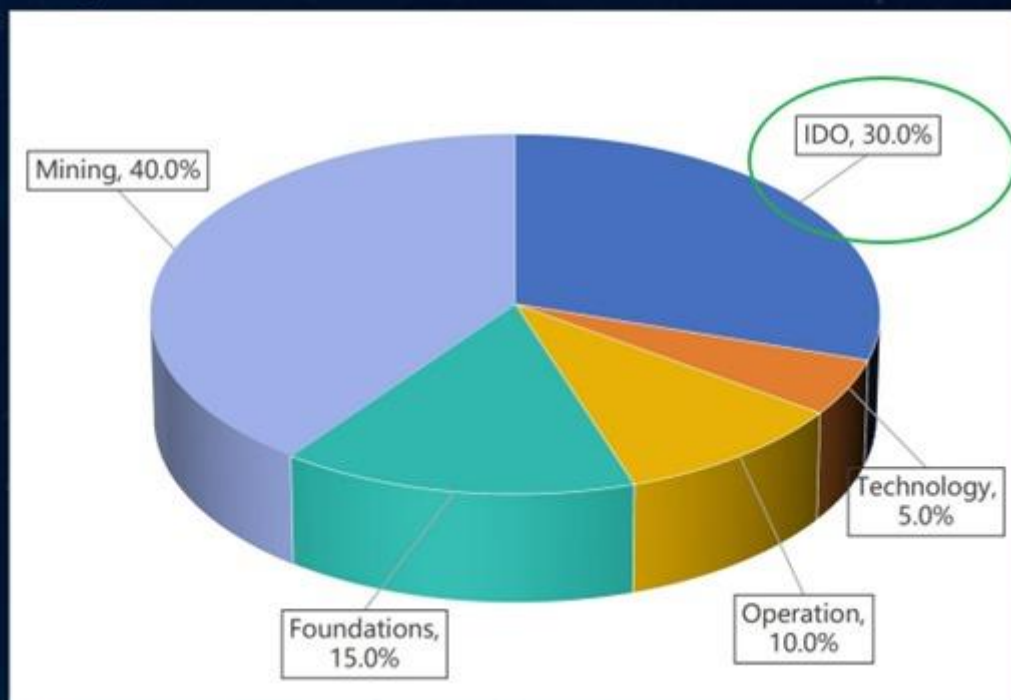

NAS COMMUNITY

Opportunities don't wait. Let's go all in and secure our financial breakthrough!

- Token name: MDHT
- Total supply: 1 billion tokens
- IDO: 30% (online subscription and allocation. Online subscription accounts for 20% and allocation accounts for 80%)
- Team: 5%
- Marketing: 10%
- Base: 15%
- Mining: 40%

NAS COMMUNITY

As emphasized in the official announcement from trading center, moving the traditional institutional offline allocation model of IPOs to an online format is a revolutionary innovation in the crypto IEO market! This shift not only opens up what was once an exclusive opportunity for institutional investors to a broader market but also ensures that all investors can fairly and transparently benefit from this transformation.

💡 Fairness and transparency, giving everyone a greater opportunity!

In this new market opportunity, our community leveraged the power of pooled capital to secure the Green Special Channel (GSC) qualification, allowing all participants to receive an allocation ranging from 15% to 45%. At that time, this was already a significant victory! However, as large investor allocation has transitioned from offline to online, all market participants now have the same opportunity. This shift not only enhances transparency but also means that the allocation of early investors has been further diluted.

NAS COMMUNITY

🚀 **Is this a challenge or an opportunity?**

In reality, this is the best chance to overcome the limitations of GSC allocations! Although GSC allocation is set at 15%-45%, if we choose to participate in large investor allocation, we can increase our GSC allocation to 100%! This means that not only can you protect your original allocation from dilution, but you can also maximize your investment returns. This isn't market unfairness, it's the market giving us an even bigger opportunity!

💰 **The multiple advantages of large investor allocation:**

✅ **Guaranteed 100% allocation and maximum returns. GSC allocations are beneficial, but they are still limited. Large investor allocation means that as long as you participate, you secure a 100% allocation, locking in all potential profits.**

✅ **Market stability, ensuring a strong price performance post-listing. The progress bar of regular subscriptions determines the opening price, but the progress bar of the final allocation determines market confidence. Once the large investor allocation is completed, the fundraising process for MDHT will be fully secured, providing strong financial backing while ensuring long-term price stability.**

NAS COMMUNITY

✔ **Surging market demand, driving up price appreciation. MDHT's IEO issue price is \$2.5, while the final progress bar of regular allocation has reached 4,503%, meaning the opening price will exceed \$110! This not only guarantees tens of times returns for early participants but also reflects the market's strong confidence in MDHT.**

🚀 **Standing at the forefront to capture market rewards!**

The listing of MDHT is not just an investment opportunity, it's a battle to shape market dominance. As GSC holders, we are already in a leading position. The question isn't whether to participate, but how to maximize our investment returns!

MDHT's total IEO issuance is 300 million tokens, with only 20% allocated for regular retail subscriptions, while 80% is allocated through private placement. This means that the vast majority of tokens will be allocated to large investors and institutions, ensuring price stability and effective market capitalization management post-listing. This structure not only provides strong support for MDHT's early investors but also lays the groundwork for its long-term market performance.

NAS COMMUNITY

Let's be clear: In this large investor allocation competition, we are not competing against each other, but against institutional investors in the market! However, if you already participated in regular subscription round and secured GSC qualification, you already hold an institutional-level allocation advantage, meaning you have the same market privileges as institutions.

By participating in large investor allocation, you can ensure a 100% allocation. This time, the opportunity is fair, and everyone is on the same starting line. The key question is: Are you ready to seize this moment and go all in? This is a test of investment foresight and execution! Success is not determined by where you start but by who makes the right decisions at critical moments.

MDHT's issuing team has a robust risk control framework, clearly stating: Any unfulfilled allocations will be reclaimed, similar to strategic placement in traditional IPO. This ensures tokens do not become overly concentrated in a few institutions' hands while maintaining market liquidity.

NAS COMMUNITY

However, this also means:

⚠ If you do not participate in large investor allocation, your GSC allocation may be further diluted!

Although GSC provides 15%-45% allocation rights, if large investor allocation is completed, the regular subscription rate may drop below 2%. In this market scenario, the only solution is to participate in large investor allocation to secure your interests!

In the investment world, we all know that retail investors' short-term behavior is often the main cause of market volatility. They tend to sell off early post-listing, leading to price swings and even panic selling. This is why the MDHT team adopts a large investor allocation strategy to distribute tokens to institutions and large investors who are willing to hold for the long term. They are not only well-capitalized, but more importantly they are full of confidence in the long-term value of MDHT.

NAS COMMUNITY

When faced with such a clear and undeniable profit opportunity, you have two choices:

- 1. Stay on the sidelines, wait for market changes, and allow your GSC allocation to be diluted, ultimately falling into uncertainty.**
- 2. Act decisively, secure a 100% allocation, capture a risk-free primary market opportunity, and prepare for the upcoming wealth surge!**

This isn't just an investment decision, it's a crucial strategic turning point! When MDHT's opening price soars past \$100, and the market is stabilized by institutional and major investor support, do you want to be in the best position to enjoy these gains?

💡 Victory belongs to those who go all in!

This time, the large investor allocation is not only a guarantee for us to obtain maximum returns, but also an opportunity to ensure that we have a higher market dominance after MDHT is listed. Investing is not a sprint, it's a marathon, and our job is to ensure we are on the right track, running at full speed!

This time, make sure you are on the winning side! 🚀

3:30 PM

Daniel Robert

Closing Commentary (α & β Strategy)

Good afternoon, community members!

I'm Daniel Robert, and the battle for wealth has begun, it's time to go all in! This morning, Helmsman delivered an insightful session that opened the door to a new world of opportunities. He didn't just break down the immense value of the Large Investor Allocation, he made one thing clear: This isn't just a subscription opportunity, it's a strategic move to seize control of market influence!

💡 Why must we participate in the Large Investor Allocation?

It's not just about securing more tokens, it's about claiming a dominant position in the future battlefield of the market! This time, we're not just followers, we are the ones shaping the rules of the game! Participating in the Large Investor Allocation is like installing a turbocharger in your wealth strategy, it's not just

NAS COMMUNITY

about capital deployment, but about making your investment move faster and go further! Higher allocation, a stronger market position, and a powerful investment edge, this is what true victory looks like!

🌟 The Core Advantage of Our NAS Community

As a member of the NAS Community, you hold a dual advantage!

- ✅ **Institutional-Scale Fund Pool** – Our allocation weight far exceeds that of retail investors, ensuring a larger share of tokens!
- ✅ **Strategic Market Influence** – Institutional capital has already rushed in, and our community is rising fast. Joining the Large Investor Allocation means securing a spot at the top of the market food chain!

💰 **The allocation progress bar is nearing the finish line, this opportunity won't last!**

🚀 **The remaining Large Investor Allocation is rapidly shrinking! Less than half of the total allocation remains, this is a true race against time. Hesitation comes at a cost, missing out on the entire game!**

NAS COMMUNITY

 **What's the next step?**

This afternoon, I'll be providing an in-depth analysis from three core perspectives:

- 1. Allocation Progress Bar: This subscription race has entered the final stretch!**
- 2. Allocation Price: Locking in the optimal cost for future excess returns!**
- 3. NAS Community's Dual Advantage: Giving us the upper hand in this capital war!**

This is our interstellar journey, and the opportunity is right ahead. Are you ready?

NAS COMMUNITY

Guys, the market is currently undergoing a dramatic transformation, and we are standing right at the front of the storm, one step ahead, seizing the truly strategic opportunities. The weekly chart of the VIX panic index clearly shows us that the market's fear is far from reaching its peak. This aligns perfectly with my previous assessment, the VIX has been consolidating around 16, just gathering momentum for a stronger upward move, which means the correction in the U.S. stock market is far from over. Meanwhile, Trump has proactively punctured the U.S. stock market bubble, and Wall Street's investment logic is beginning to falter. Both the U.S. dollar and U.S. stocks are facing unprecedented challenges.

Trump is waving the tariff flag abroad, while Musk is pushing for government spending cuts domestically. Combined with the rise of China's tech power and Europe's full policy shift, the U.S. market's monopoly advantage is gradually unraveling. Global capital is flowing into markets with greater growth potential, and the market share of U.S. stocks is rapidly declining. All of this indicates that the golden era of U.S. stocks is fading, and capital is now searching for new safe havens.

NAS COMMUNITY

Meanwhile, the White House's first crypto summit did not bring the expected positive outcomes, and Bitcoin's price came under pressure, falling below \$80,000. Trump's remarks seemed more like symbolic statements and did not result in any truly revolutionary policy changes. All of this aligns perfectly with the Helmsman's analysis, institutional funds will not buy in at high levels, but instead, will use the market correction to heavily invest in Bitcoin at lower prices. Therefore, our strategy must be to patiently wait for the stock market and Bitcoin to finish their adjustments, then buy on the dip. This is the true winning mindset in the capital markets.

The key point is that the timing of this adjustment cycle perfectly aligns with the launch of MDHT. In other words, the current market uncertainty provides us with an excellent window to lock in substantial short-term profits when MDHT goes public, and then position ourselves strategically in global high-quality assets after the adjustment ends. This is the dual strategic approach we are executing, which allows us to profit from MDHT's short-term surge and achieve greater wealth appreciation in the next round of opportunities in the stock market.

NAS COMMUNITY

Opportunities always belong to those who are patient, calm, and capable of executing strategies precisely. What we are doing now is not just for today's gains, but for paving the way to financial freedom in the future. This round of market adjustment will open a whole new growth window for us, and MDHT is the first step towards our upcoming breakthrough!

Patience, strategy, action, now is the time to set the stage for the future. Let's give it our all and win the success that belongs to us in this perfect rhythm!

Guys, the game rules have completely changed! The regular subscription progress bar is locked at 4503%, which means the opening price of MDHT will firmly break \$100, and the regular subscription phase is officially over, marking the beginning of a whole new era of large investor allocations!

NAS COMMUNITY

Now, the market has entered a true capital showdown! This stage is not just about financial strength, it's a test of your strategy, insight, and execution. For those holding GSC privileges, this moment is your opportunity to demonstrate true influence! Large investor allocations not only offer higher distribution ratios and greater returns, but they are also a true ticket that propels us to the top of the market.

Think about what this means, this is no longer a traditional retail investor subscription, but a capital strategy that only a few elite can participate in! MDHT's large investor allocation mechanism is identical to the "large allocations" seen in Wall Street IPOs. The entry of institutional investors not only ensures the project's successful listing but also secures our position as market winners!

NAS COMMUNITY

But here's the key issue, opportunities are fair, but resources are always limited! The trading center's announcement has made it clear that the institutional offline allocation model has successfully transitioned online, giving everyone an equal opportunity to compete. However, this also means that all early GSC subscription quotas will be diluted. For those investors who haven't made significant allocations yet, this is a once-in-a-lifetime opportunity to fill the gap and re-enter the race for a larger market share!

The key now is, how will you use this online institutional allocation to seize your future wealth leap? If you missed the earlier large-scale subscriptions, this is your chance for a comeback! If you've already gained the upper hand, then the institutional allocation is your ultimate weapon to solidify your market position and expand your profits! The capital market never waits for the hesitant; only those who act decisively can become the ultimate winners!

Guys, this is an undisputed zero-risk, guaranteed wealth opportunity, you have to go ALL IN! This round of allocation could be the key step to achieving a breakthrough. If you want to join the ranks of top investors, now is the time to take action!

NAS COMMUNITY

Guys, the progress bar for the Large Investor Allocation has clearly shown us one thing, time waits for no one, and opportunities are only for those who act decisively! As the progress bar continues to rise, it not only signifies the successful completion of the fundraising activity, but also marks a new level of market recognition for MDHT! The progress bar for general subscriptions determines the opening price, while the existence of the large investor allocation is the key to ensuring price stability and market capitalization growth post-listing!

Let's let the numbers speak for themselves, assuming the IEO price of MDHT is \$2.5, and the subscription progress bar locks in at 4503%, the opening price will easily exceed \$100! Now, looking at the large investor allocation, its subscription price is \$3.5, which is higher than the regular online subscription price, and this is the result of the premium mechanism! In other words, by participating in the large investor allocation now, you're almost guaranteed to secure your allocation and ensure profits!

NAS COMMUNITY

More importantly, this isn't just a test of capital, it's a race against time! Helmsman made it clear this morning: the more allocation you secure, the greater your potential returns! Are you really going to wait until the allocation is completely taken, only to regret not acting decisively?

The reality is simple, if you don't participate, your previous GSC subscription allocation (15%-45%) will be automatically diluted. But if you do participate, you secure a 100% guaranteed allocation! This is a strategic wealth competition, the only question is: Are you willing to seize it?

The opportunity is right in front of you, the Large Investor Allocation isn't just a key step in solidifying our existing gains, but also the best guarantee for securing future profits! This isn't just another allocation, it's the capital that will give us a decisive edge in the future market competition!

NAS COMMUNITY

Guys, let me emphasize this one more time: If you don't participate, your GSC allocation will be further diluted. But if you act decisively, you'll lock in a 100% guaranteed allocation, ensuring you stay undefeated in this market cycle! Opportunities won't wait for hesitation. Go all in, seize this Large Investor Allocation, and let's keep accelerating on the path to wealth, racing toward the top! 🔥🚀

the situation couldn't be clearer, MDHT's Large Investor Allocation isn't just an opportunity to lock in wealth, it's a battle for the future, for dignity, and for the ultimate dream! Our NAS community is on the fast track to the top, and the most critical move right now is to GO ALL IN on this Large Investor Allocation!

More importantly, we hold a dual advantage, one that other investors simply can't match! First, the unique value of the 'Green Special Channel' has once again been validated! It not only gave us a dominant position in the first subscription round but also ensured that we advanced directly to qualify for the Large Investor Allocation! This means we now have a higher allocation ratio, lower risk, and a firm grip on market dominance, securing substantial future returns.

NAS COMMUNITY

Second, for those who missed out on GSC, this is your chance to make up for it! The exchange's announcement clearly states that the minimum entry requirement for the Large Investor Allocation is a \$200,000 subscription in the regular round. However, thanks to our NAS community's fund pool advantage, the average amount per UID has already far exceeded this threshold! This means that every community member who participated in MDHT's regular subscription is now automatically qualified for the Large Investor Allocation! Missed GSC? This time, you can't afford to miss out again!

Faced with this opportunity, smart investors will always choose a 100% guaranteed allocation rather than gamble on a less than 2% chance in the regular subscription! Right now, the only right move is to go all in and secure your spot in the Large Investor Allocation! This isn't just about maximizing returns, it's a critical turning point in our investment strategy.

For those who joined through the Green Special Channel, your opportunity is even greater! Participating in the Large Investor Allocation doesn't just guarantee 100% of your allocation, it also ensures that every dollar of GSC funds invested in MDHT will receive a full allocation! This is the ultimate advantage that secures our all-in strategy with absolute certainty!

NAS COMMUNITY

When MDHT's opening price surpasses \$100 and your investments deliver explosive returns, you'll look back and thank yourself for taking action today. This isn't just an investment, it's a full-speed sprint toward financial freedom!

Guys, now is the time to act! No hesitation, no second-guessing, go all in on the Large Investor Allocation and sprint toward the finish line! Let's seize this moment together and claim our path to the ultimate peak of success! 🚀 🔥

AI 5.0
